

TellUs & MinimUs

Thank you for choosen Entreq

Every home has a range of products that cause interference & pollutants to enter the mains supply. These products can range from a simple fluorescent light, heating control or even the humble domestic appliance's, scattered around your home.

Many modern home appliances use switching power supplies, these are particularly bad for polluting the mains with high frequency interference. This interference, from a music lover's perspective, can litter the ground/earth plane with noise & also create strong, stray magnetic fields. This in turn can severely affect the sound quality of the music lover's system/setup.

An inherent problem with three phase electrical systems is the level of "stray currents" which are invariably present. Excess power or energy is returned to the ground or earth point, where it is joined to the earth in the fuse box or / and additionally to the protective ground, also found in the water pipe system of your home.

Based on the well understood basic philosophy that vibrational energy, magnetic fields and electronic interference negatively effect's audio equipment, Entreq have for many years been developing products to combat these fundamental issue's. Entreq's unique & novel solution involved creating an additional layer of grounding & earthing for the music system the "Minimus & Tellus" as well as a passive line filter "Cleanus" and a distribution box " PowerUs".

At Entreq we realized that individual grounding of equipment is vital to the musical performance. The variances in the ground plane will differ from system to system, so to control these, we had to develop an absolutely clean & constant ground point for all our own signal cables (Minimus & Tellus). We therefore include independent grounding points on all of our signal cables, BUT IN ADDITION, we also have an independent range of Accessories - connections for non-Entreq cable users to experience the incredible difference. Simply connect one of these solutions to the heart of your system (Pre-amp) and connect to a Minimus or Tellus & you will hear a significant improvement in your music replay. Each additional Ertha point will further enhance the performance. Please speak to your ourselves, your local distributor or retailer to further advise you regarding maximizing your systems performance using Entreq products.

Protective ground/earth should never be disconnected! Tellus/Minimus should be seen as an additional ground/earth and its effect depends on the quality of the users ground floor. Tellus & Minimus should be sited away from your other equipment to maximize their performance.

We strongly recommend our various better quality dedicated ground cables. We hope you will have many wonderful musical experiences with our products.

Per-Olof Friberg
CEO, Entreq

Accessories from Entreq

Ertha RCA

Ertha Copper

Ertha Silver

We supply a basic copper cable with our products but you will find significant leaps in performance when using our better quality cables.

Accessories from Entreq

CleanUs

PowerUs

Cleanus works as a separator and eliminator of high current frequencies. Cleanus should be connected to the wall socket or to Powerus. For even better performance connect Cleanus to a Tellus with an Ertha cable.
