Vibbeaters

Congratulations on your purchase of a Vibbeater

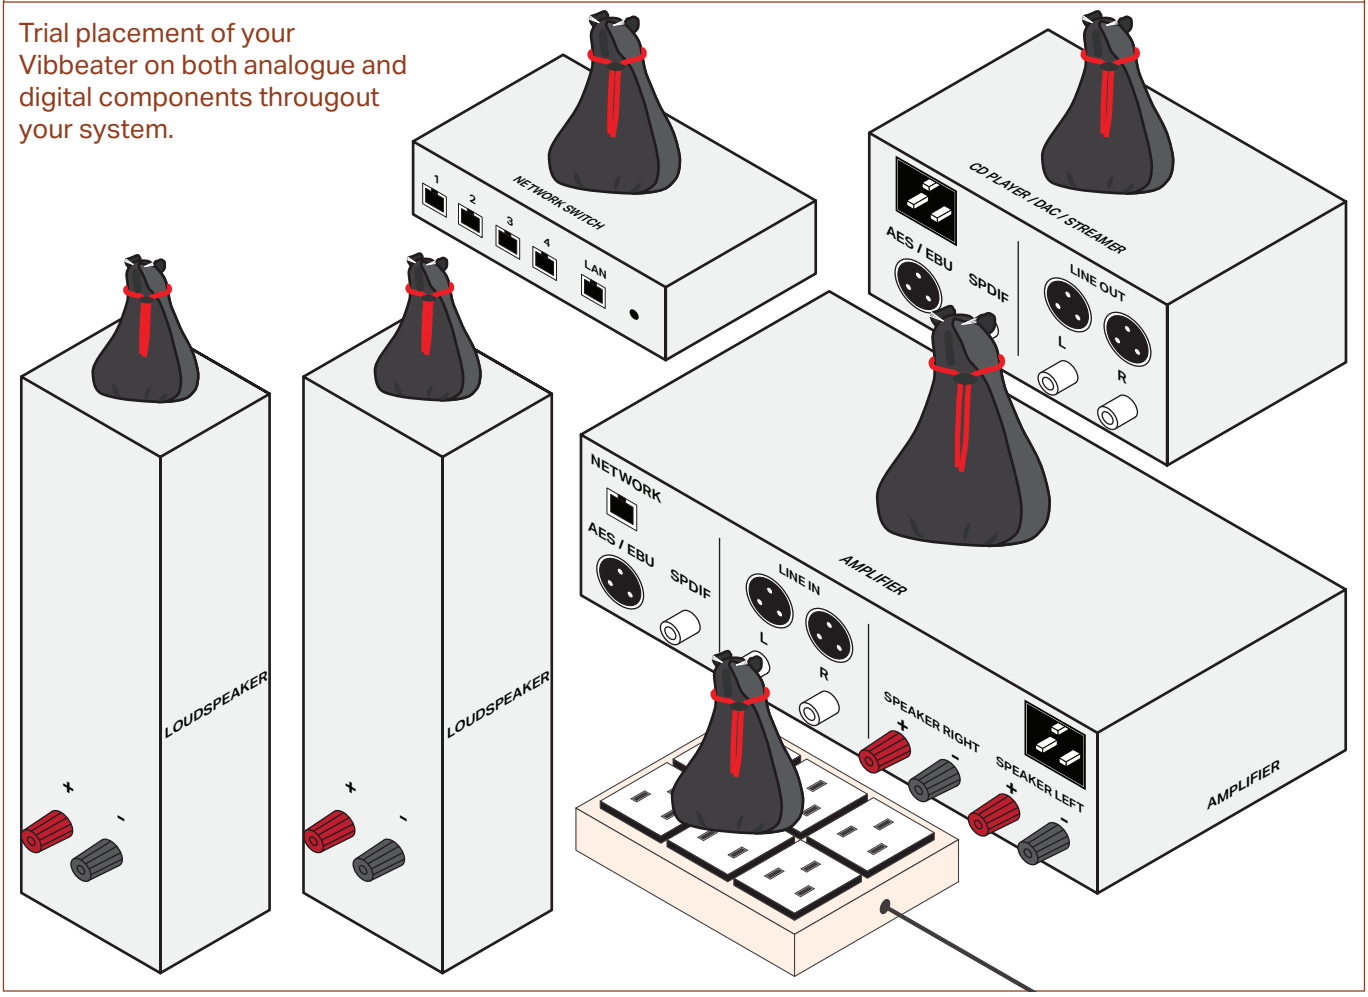
You have made an investment that we are confident will improve your listening experience and bring you joy for many years to come.

How it works

Vibbeaters are quite simply placed on top of components in your system. They work in three ways. First, they give the component on which they are placed greater stability simply by means of the weight they apply. Second, they convert unwanted vibrations from within the component to low-level heat via the specific granular mineral mixture within the Vibbeater. Third, they affect the magnetic fields generated in and around the component on which they are placed, reducing EMI and RFI.

Every single Vibbeater is carefully stitched, filled and finished by hand at our factory in Sweden. They will work hard for you for a lifetime.

We recommend experimenting with the placement of your Vibbeater throughout your system to see where it has the most pleasing effect.

Possible placements for your Vibbeater


Trial placement of your Vibbeater on both analogue and digital components througout your system.
